The 2022 Annual Program Assessment Reports for Undergraduate Degree Programs will be collected online using Qualtrics during the open reporting window – anytime from mid-December through February.

Sample Entries. This document contains sample entries and guidance for key areas of the report, intended to offer a useful level of concrete detail for a range of assessment activities reported by WSU undergraduate programs in different disciplines.

- Use of Assessment: Decisions/Actions Informed by Assessment of Specific Program-level Student Learning Outcomes (SLOs) (Section A. Part 6.B.)
- Focus on Program-level SLO Achievement Near End of Curriculum (Section B)
- APPENDIX: Guidance Related to Question about Program-level Contribution to Achievement of WSU’s Learning Goals of Undergraduate Education

Questions? The Office of Assessment for Curricular Effectiveness (ACE) is available to provide guidance, answer questions, and help programs complete their annual report. Please contact ACE at ace.office@wsu.edu.
6.B. Use of Assessment: Decisions/Actions Informed by Assessment of Specific Program-level SLOs

While all program assessment activities and data can provide useful information for program improvement, using assessment of specific program-level student learning outcomes (SLOs) to inform decision-making is crucial to supporting quality undergraduate curricula and student achievement. Note: While all program-level SLOs do not need to be measured annually, program-level SLOs should be measured/reviewed within a reasonable cycle.

In assessment cycles aligned with specific program-level SLOs, a degree program begins with one or more program-level SLOs, assesses student learning related to these outcomes using a combination of direct and indirect measures, and uses the data to inform program decision-making to support student learning, including decisions/actions related to curriculum, instruction, assignments; some decisions may focus on improving program assessment processes. Decisions/actions may include intentionally choosing to continue current effective practices, building on the program’s existing strengths, and/or making changes to the program.

Over the course of the past year (Jan 1 – Dec 31), did this program make a decision/take an action that was informed by direct and/or indirect assessment of a specific program-level SLO? Note: A decision/action in the past year may have been informed by assessment data collected in previous years. It is not expected that programs complete an assessment cycle every year, or that programs complete an entire assessment cycle for a particular SLO in one year.

☑ Yes, our program made a decision/took an action in the past year that was informed by assessment of a specific program-level SLO  ➔ SEE SAMPLE ENTRIES ON PAGES 3-4
☑ No, our program did not make a decision/take an action in the past year that was informed by assessment of a specific program-level SLO  ➔ SEE SAMPLE ENTRIES ON PAGE 5
### Example of Decision/Action Informed by Assessment of a Specific Program SLO

<tbody>
<tr>
<td><strong>Program-level SLO Assessed:</strong> Effective Written Communication in the Discipline</td>
<td>Faculty assessment revealed most students were able to write for a science audience, with some common problem areas in writing for the public. In discussion, faculty noted that students may not understand expectations of senior level writing and wanted juniors to be aware of expectations. Student perceptions from the exit survey indicated that students are less confident in their ability to write clearly, as compared to other skill areas.</td>
<td>Assessment results prompted faculty discussions about improving writing instruction in the major and we created a student version of our writing rubric to use in junior and senior-level classes to help communicate expectations to students.</td>
</tr>
<tr>

<tr>
<td>Evaluation of 75 capstone oral presentations by six faculty using a program rubric. Focus groups including approximately 50 seniors, collected over four semesters: 2020-21 and 2021-22.</td>
<td>Faculty assessments show that most students are meeting expectations in this area. Student focus group results revealed that students found the research mentorship program helpful for obtaining faculty input.</td>
<td>We decided to continue the research mentorship program for senior projects in addition to maintaining our current curriculum for this SLO.</td>
</tr>
</tbody>
</table>

| Program-level SLO Assessed: Scientific Reasoning | Category Corresponding to Type of Decision/Action: Change to program assessment processes |
|-----------------|-----------------|------------------|
| The program piloted a new assessment rubric with two faculty and 12 senior posters in a Spring 2022 capstone course to measure our scientific reasoning outcome. | Faculty thought that the rubric seemed to work well to assess student posters; however due to extenuating circumstances during the pilot we lacked representative data. | We decided to use the rubric with senior work in another 400-level course in Fall 2022 and again in the capstone course in Spring 2023 to achieve a more representative sample of students. |

| Program-level SLO Assessed: Present, assess, and analyze appropriate supporting data/evidence in research | Category Corresponding to Type of Decision/Action: Decision to continue current effective assessment processes |
|-----------------|-----------------|------------------|
| Roughly 25 faculty and teaching assistants assessed 10-30 student papers with the program’s rubric for this learning outcome in each of their own classes, after attending a norming session. Data collected 2021, Spr & Fall. | Analysis of data from two semesters showed the importance of norming as validated by the consistency in scores. | We will continue norming sessions as part of our assessment process. |

| Program-level SLO Assessed: Scientific Literacy | Category Corresponding to Type of Decision/Action: Decision/action related to faculty/TA development |
|-----------------|-----------------|------------------|
| Four faculty evaluated approx. 130 assignments embedded in the Research Methods course using an assessment rubric. Data was collected for three semesters: Sp18, Sp19, Sp20. | Scores in XXX 315 generally show that our students are at the "developing" level, where faculty expect most juniors to be. However, there is great variability in scores, depending on the campus where assessment was done. | Faculty attended an assignment design workshop to consider what types of assignments are being assessed and how the type of assignment is affecting scores / performance. |

| Program-level SLO Assessed: Integrative Learning | Category Corresponding to Type of Decision/Action: Change to curriculum, instruction, or assignments AND Change to program assessment processes |
|-----------------|-----------------|------------------|
| Five faculty used a program rubric to evaluate ten final group projects in Spring 2021. | Faculty learned that they were not able to assess individual student performance on this SLO using group projects. | The program decided the change the final group project to also include an individual component. |
**6.B. Use of Assessment: Decisions/Actions Informed by Assessment of Specific Program SLOs, CONTINUED**

**IF NO:** In the spaces below, provide an example that indicates where the program is in the assessment cycle for ONE program-level SLO.

Section B. Focus on Program-level SLO Achievement Near End of Curriculum

An effective system of program-level assessment includes direct measures near the end of the curriculum, providing programs with information about student achievement of program-level student learning outcomes (SLOs) as majors are completing the curriculum. While all program-level SLOs do not need to be measured annually, student achievement of program-level SLOs near the end of the curriculum should be measured/reviewed within a reasonable cycle. Note: Student achievement of program-level SLOs near the end of the curriculum may include seniors and/or juniors, as best fits the program context.

Section B of this report focuses on achievement of program-level SLOs by your majors near the end of the curriculum. SLO achievement summary information helps programs demonstrate academic strengths, as well as set priorities for improvement, and supports WSU’s strategic planning and mission fulfillment.

Achievement of Program-level SLOs Near End of Curriculum

In the past year (Jan 1 – Dec 31), did program faculty review/discuss representative assessment results from one or more direct measures of student learning for your majors near the end of the curriculum that indicated student achievement of at least one program-level SLO? Note: Faculty may have reviewed/discussed results from an assessment measure collected in previous years. It is not expected that programs complete a particular assessment cycle in one year.

☑ Yes, our program reviewed/discussed representative assessment results in the past year, from one or more direct measures near the end of the curriculum, that indicated SLO achievement for our majors ➔ SEE SAMPLE ENTRIES ON PAGES 7-11

☑ No, our program did not review/discuss representative assessment results in the past year, from one or more direct measures near the end of the curriculum, that indicated SLO achievement for our majors ➔ SEE SAMPLE ENTRIES ON PAGE 12

Note for Multi-Campus Degrees: Section B of this report is intended to consider program-level SLO achievement for the degree as a whole. (While WSU expects programs offered on multiple campuses to collect measures of student learning for students on each campus offering the degree, it is not necessary here to report SLO achievement separately for each campus.)
Section B. Focus on Program-level SLO Achievement Near End of Curriculum, CONTINUED

**IF YES, SCENARIO 1:** In a culminating course that is a requirement for juniors in the major’s teaching option and seniors in the major’s general option, instructors use a program rubric to assess final projects for three program SLOs. After reviewing the rubric scores, program faculty found that student performance in the culminating course has been strong for these three learning outcomes over multiple years, and meets program faculty expectations.

Please indicate the number of program-level SLOs where faculty who teach reviewed/discussed student achievement near the end of the curriculum:

3

Of these, please indicate the number of program-level SLOs where student achievement near the end of the curriculum met or exceeded program faculty expectations:

3

Please list the program-level SLOs where student achievement near the end of the curriculum met or exceeded program faculty expectations.

- Written communication
- Organizing, synthesizing, and effectively using sources
- Defining, analyzing, and solving problems

Please briefly describe the direct measure(s) near the end of the curriculum used to determine student achievement of program-level SLOs, including how the measures were collected, how program faculty reviewed/discussed the results, and how the measures provided adequate representation of your students. Note: Assessing the entire group of students near the end of the curriculum (a census), will accurately reflect the variations and diversity represented within that population as all students are included. Assessing a subset of students near the end of the curriculum (a sample) provides adequate representation when the sample parallels the key variables and characteristics of the population, such as sex, age, campus, major/option, or other key variables and characteristics of interest depending on the context of a particular program.

Culminating final projects were scored by the course instructor using a program rubric for three program SLOs. Each student in the culminating course was assessed and the course is a requirement for all majors (including juniors in the major’s teaching option and seniors in the major’s general option), therefore all majors are assessed near the end of the curriculum. In Spring 2022, the program’s faculty assessment committee reviewed data from three semesters, Spring 2021, Spring 2020, and Spring 2019, to evaluate student performance on these SLOs.

Program-level Contribution to Achievement of WSU’s Learning Goals of Undergraduate Education. All undergraduates are expected to achieve **WSU’s Learning Goals of Undergraduate Education**, which identify core skills and knowledge that students should develop through their undergraduate studies. Through the achievement of program-level student learning outcomes, students demonstrate specialized knowledge and skills in the discipline, as well as disciplinary achievement of some of WSU’s Learning Goals (as appropriate to the disciplinary focus), through depth of study within the chosen academic field. WSU’s Learning Goals are expressed broadly so as to frame study in the major as well as general education.

Based on the program SLOs you listed above, where achievement near the end of the curriculum met or exceeded faculty expectations, which of the following WSU Learning Goals did your students achieve? (select all that apply) [see the appendix for guidance related to this question]

- Critical and Creative Thinking
- Quantitative Reasoning
- Depth, Breadth, and Integration of Learning
- Information Literacy
- Scientific Literacy
- Communication
- Diversity
- None of the above
Section B. Focus on Program-level SLO Achievement Near End of Curriculum, CONTINUED

IF YES, SCENARIO 2: A program uses a rubric to assess student oral presentations for their oral communication program SLO, and has used historical trend data to establish a program benchmark stating that at least 80% of senior majors should meet or exceed program expectations for oral communication at a minimally acceptable level. For AY 2021-22, the program finds that 82% of seniors are meeting program expectations for oral communication at a minimally acceptable level or above, meeting the program’s established target.

Please indicate the number of program-level SLOs where faculty who teach reviewed/discussed student achievement near the end of the curriculum:

1

Of these, please indicate the number of program-level SLOs where student achievement near the end of the curriculum met or exceeded program faculty expectations:

1

Please list the program-level SLOs where student achievement near the end of the curriculum met or exceeded program faculty expectations.

Oral communication

Please briefly describe the direct measure(s) near the end of the curriculum used to determine student achievement of program-level SLOs, including how the measures were collected, how program faculty reviewed/discussed the results, and how the measures provided adequate representation of your students. Note: Assessing the entire group of students near the end of the curriculum (a census), will accurately reflect the variations and diversity represented within that population as all students are included. Assessing a subset of students near the end of the curriculum (a sample) provides adequate representation when the sample parallels the key variables and characteristics of the population, such as sex, age, campus, major/option, or other key variables and characteristics of interest depending on the context of a particular program.

Student oral presentations in the capstone course are observed and rated for oral presentation skills by assessment committee members using a program rubric, during final presentations on the Pullman Campus (both fall and spring semesters). At least 2 faculty scored oral presentations using a program-level rubric. Global Campus students are also assessed using recordings. Every student in the capstone course was assessed and the course is a requirement for senior majors, therefore all senior majors were assessed. In Fall 2022, the Undergrad Studies Committee reviewed the AY 2021-22 data and found that senior performance met our target for this SLO.

Program-level Contribution to Achievement of WSU’s Learning Goals of Undergraduate Education. All undergraduates are expected to achieve WSU’s Learning Goals of Undergraduate Education, which identify core skills and knowledge that students should develop through their undergraduate studies. Through the achievement of program-level student learning outcomes, students demonstrate specialized knowledge and skills in the discipline, as well as disciplinary achievement of some of WSU’s Learning Goals (as appropriate to the disciplinary focus), through depth of study within the chosen academic field. WSU’s Learning Goals are expressed broadly so as to frame study in the major as well as general education.

Based on the program SLOs you listed above, where achievement near the end of the curriculum met or exceeded faculty expectations, which of the following WSU Learning Goals did your students achieve? (select all that apply) [see the appendix for guidance related to this question]

- Critical and Creative Thinking
- Quantitative Reasoning
- Depth, Breadth, and Integration of Learning
- Communication
- Information Literacy
- Scientific Literacy
- Diversity
- None of the above
Section B. Focus on Program-level SLO Achievement Near End of Curriculum, CONTINUED

**IF YES, SCENARIO 3:** All seniors in a program complete a national certifying exam (aligned with 5 program SLOs) prior to graduation. The program faculty reviewed the exam results for their seniors compared to the national average and found that students were meeting faculty expectations for all 5 SLOs.

Please indicate the number of program-level SLOs where faculty who teach reviewed/discussed student achievement near the end of the curriculum:

5

Of these, please indicate the number of program-level SLOs where student achievement near the end of the curriculum met or exceeded program faculty expectations:

5

Please list the program-level SLOs where student achievement near the end of the curriculum met or exceeded program faculty expectations.

- Demonstrate proficiency in prevention and health promotion, including application of general prevention principles
- Apply knowledge of basic science and research methodology to interpret evidence-based research
- Integrate aspects of physical and mental health, and patient and community values
- Demonstrate an advanced understanding of issues related to athletic training
- Demonstrate attitudes, behaviors, and practices that support personal well-being and life-long learning

Please briefly describe the direct measure(s) near the end of the curriculum used to determine student achievement of program-level SLOs, including how the measures were collected, how program faculty reviewed/discussed the results, and how the measures provided adequate representation of your students. Note: Assessing the entire group of students near the end of the curriculum (a census), will accurately reflect the variations and diversity represented within that population as all students are included. Assessing a subset of students near the end of the curriculum (a sample) provides adequate representation when the sample parallels the key variables and characteristics of the population, such as sex, age, campus, major/option, or other key variables and characteristics of interest depending on the context of a particular program.

All graduating seniors, across all 3 campuses, take a national certification exam in their 4XX course. Results for specific exam sections are aligned with 5 program SLOs, providing data for the entire senior cohort. In spring 2022, program faculty reviewed data from 2021 and 2020 (including exam results for WSU seniors compared to national averages) and found that students were meeting program expectations for all 5 SLOs.

Program-level Contribution to Achievement of WSU’s Learning Goals of Undergraduate Education. All undergraduates are expected to achieve WSU’s Learning Goals of Undergraduate Education, which identify core skills and knowledge that students should develop through their undergraduate studies. Through the achievement of program-level student learning outcomes, students demonstrate specialized knowledge and skills in the discipline, as well as disciplinary achievement of some of WSU’s Learning Goals (as appropriate to the disciplinary focus), through depth of study within the chosen academic field. WSU’s Learning Goals are expressed broadly so as to frame study in the major as well as general education.

Based on the program SLOs you listed above, where achievement near the end of the curriculum met or exceeded faculty expectations, which of the following WSU Learning Goals did your students achieve? (select all that apply)

[see the appendix for guidance related to this question]

- Critical and Creative Thinking
- Quantitative Reasoning
- Depth, Breadth, and Integration of Learning
- Information Literacy
- Scientific Literacy
- Communication
- Diversity
- None of the above
Section B. Focus on Program-level SLO Achievement Near End of Curriculum, CONTINUED

IF YES, SCENARIO 4: A program used a rubric to assess senior capstone papers for four program SLOs in fall 2021. Following faculty review and discussion of the results in fall 2022, the program found that students’ average ratings for 3 of the 4 learning outcomes met the program’s “3-Capable” standard. However, for one learning outcome the average rating of 2, fell below the standard.

Please indicate the number of program-level SLOs where faculty who teach reviewed/discussed student achievement near the end of the curriculum:

4

Of these, please indicate the number of program-level SLOs where student achievement near the end of the curriculum met or exceeded program faculty expectations:

3

Please list the program-level SLOs where student achievement near the end of the curriculum met or exceeded program faculty expectations.

- Ability to communicate effectively in writing
- Ability to design and conduct experiments as well as analyze and interpret data
- Ability to apply knowledge of mathematics, science, and engineering

Please briefly describe the direct measure(s) near the end of the curriculum used to determine student achievement of program-level SLOs, including how the measures were collected, how program faculty reviewed/discussed the results, and how the measures provided adequate representation of your students. Note: Assessing the entire group of students near the end of the curriculum (a census), will accurately reflect the variations and diversity represented within that population as all students are included. Assessing a subset of students near the end of the curriculum (a sample) provides adequate representation when the sample parallels the key variables and characteristics of the population, such as sex, age, campus, major/option, or other key variables and characteristics of interest depending on the context of a particular program.

Faculty scored a sample of senior capstone papers from our required 4XX course from students representing the program’s four major options. Random samples of 20 papers were scored for each of our three most popular options; for the option where student numbers are small, all 8 senior papers were scored. This allows us to assess performance strengths and weaknesses within our options as well as for the degree overall. Program faculty reviewed and discussed these results in fall 2022 to determine senior major achievement.

Program-level Contribution to Achievement of WSU’s Learning Goals of Undergraduate Education. All undergraduates are expected to achieve WSU’s Learning Goals of Undergraduate Education, which identify core skills and knowledge that students should develop through their undergraduate studies. Through the achievement of program-level student learning outcomes, students demonstrate specialized knowledge and skills in the discipline, as well as disciplinary achievement of some of WSU’s Learning Goals (as appropriate to the disciplinary focus), through depth of study within the chosen academic field. WSU’s Learning Goals are expressed broadly so as to frame study in the major as well as general education.

Based on the program SLOs you listed above, where achievement near the end of the curriculum met or exceeded faculty expectations, which of the following WSU Learning Goals did your students achieve? (select all that apply)

- [ ] Critical and Creative Thinking
- [ ] Information Literacy
- [ ] Quantitative Reasoning
- [ ] Scientific Literacy
- [ ] Communication
- [ ] Diversity
- [ ] Depth, Breadth, and Integration of Learning
- [ ] None of the above

Note: Programs should report program-level SLO achievement based on the faculty-determined expectations that fit their unique context. WSU respects program autonomy in deciding the most useful approach to guide improvement in their programs and courses.
Section B. Focus on Program-level SLO Achievement Near End of Curriculum, CONTINUED

**IF YES, SCENARIO 5:** Program faculty used a program rubric to assess senior capstone projects for two program SLOs. Following faculty review and discussion of the results, program faculty determined that seniors met expectations for functioning effectively on a team, but showed deficiencies in written communication.

Please indicate the number of program-level SLOs where faculty who teach reviewed/discussed student achievement near the end of the curriculum:

Of these, please indicate the number of program-level SLOs where student achievement near the end of the curriculum **met or exceeded** program faculty expectations:

---

Please list the program-level SLOs where student achievement near the end of the curriculum **met or exceeded** program faculty expectations.

An ability to function effectively on a team

Please briefly describe the direct measure(s) **near the end of the curriculum** used to determine student achievement of program-level SLOs, including how the measures were collected, how program faculty reviewed/discussed the results, and how the measures provided **adequate representation of your students**. Note: Assessing the entire group of students near the end of the curriculum (a census), will accurately reflect the variations and diversity represented within that population as all students are included. Assessing a subset of students near the end of the curriculum (a sample) provides adequate representation when the sample parallels the key variables and characteristics of the population, such as sex, age, campus, major/option, or other key variables and characteristics of interest depending on the context of a particular program.

In fall 2021, a random sample of 24 senior projects in the required 4XX capstone class were each evaluated by two faculty (8 faculty participated, and each scored 6 projects) using the program rubric. These senior projects are complex and time-intensive to score, therefore sampling is more feasible than assessing all students. In spring 2022, faculty discussed the level of senior major achievement demonstrated in our 2021 data.

Program-level Contribution to Achievement of WSU’s Learning Goals of Undergraduate Education. All undergraduates are expected to achieve WSU’s Learning Goals of Undergraduate Education, which identify core skills and knowledge that students should develop through their undergraduate studies. Through the achievement of program-level student learning outcomes, students demonstrate specialized knowledge and skills in the discipline, as well as disciplinary achievement of some of WSU’s Learning Goals (as appropriate to the disciplinary focus), through depth of study within the chosen academic field. WSU’s Learning Goals are expressed broadly so as to frame study in the major as well as general education.

Based on the program SLOs you listed above, where achievement near the end of the curriculum **met or exceeded** faculty expectations, which of the following WSU Learning Goals did your students achieve? (select all that apply)

- Critical and Creative Thinking
- Quantitative Reasoning
- Depth, Breadth, and Integration of Learning
- Information Literacy
- Scientific Literacy
- Communication
- Diversity
- None of the above

---

Note: Programs should report program-level SLO achievement based on the faculty-determined expectations that fit their unique context. WSU respects program autonomy in deciding the most useful approach to guide improvement in their programs and courses.
Section B. Focus on Program-level SLO Achievement Near End of Curriculum, CONTINUED

**IF NO, SCENARIO 1:** A program piloted an assessment of capstone projects using their new program rubric for four program SLOs. Program faculty scored 6 of the 50 capstone projects to test the rubric. While program faculty were happy with the language on the rubric and ease of use, they recognized that this pilot did not produce representative results of their students’ SLO achievement and are planning to scale up the pilot in the following AY to assess 25 projects in fall and another 25 projects in the spring.

Please indicate where your program is in this process and any next steps.

We piloted an assessment of 6 senior capstone projects using our new program rubric for 4 program SLOs. We are planning to scale up the pilot next AY to produce more representative results. We plan to assess 25 projects in fall and another 25 projects in the spring.

**IF NO, SCENARIO 2:** A program collected internship mentor feedback about each student’s performance at the end of their senior internship experience (each senior in the program is required to complete an internship). Program faculty reviewed and discussed the mentor feedback results and found that the assessment was not adequately evaluating student performance on program SLOs and are planning to revise the instrument.

Please indicate where your program is in this process and any next steps.

Program faculty reviewed and discussed internship mentor feedback results and found that the assessment was not adequately evaluating student performance on program SLOs. The undergraduate studies committee will be revising the internship mentor feedback form to more closely align with program SLOs and expectations.

**IF NO, SCENARIO 3:** A program developed a rubric for three of their learning outcomes. Instructors teaching the culminating classes in each major used the rubric to assess final projects for each student. The rubric was piloted in fall 2021 and used again in spring 2022. These assessment results have yet not been reviewed and discussed by program faculty.

Please indicate where your program is in this process and any next steps.

We developed a rubric for three program SLOs and instructors teaching the culminating classes in each major used the rubric to assess final projects for each of their students (piloted in fall and used again in spring). These assessment results will be reviewed and discussed by program faculty at our retreat in spring 2023.

**IF NO, SCENARIO 4:** A program recently completed a substantial revision of their program-level SLOs, and has not yet collected a direct measure near the end of the curriculum.

Please indicate where your program is in this process and any next steps.

The program recently completed a substantial revision of our program-level SLOs, and we have not yet collected a direct measure near the end of the curriculum for the new SLOs. We plan to develop and pilot a direct measure for two SLOs next AY.
APPENDIX: Guidance Related to Question about Program-level Contribution to Achievement of WSU’s Learning Goals of Undergraduate Education

This appendix is intended to help undergraduate degree programs complete the question on the 2022 annual program assessment report that asks programs to select the WSU Learning Goals their majors are achieving near the end of the curriculum (based on the program-level SLOs where student achievement near the end of the curriculum met or exceeded program faculty expectations).

**QUESTION TEXT:**

**Program-level Contribution to Achievement of WSU’s Learning Goals of Undergraduate Education.** All undergraduates are expected to achieve [WSU’s Learning Goals of Undergraduate Education](#), which identify core skills and knowledge that students should develop through their undergraduate studies. Through the achievement of program-level student learning outcomes, students demonstrate specialized knowledge and skills in the discipline, as well as disciplinary achievement of some of WSU’s Learning Goals (as appropriate to the disciplinary focus), through depth of study within the chosen academic field. WSU’s Learning Goals are expressed broadly so as to frame study in the major as well as general education.

Based on the program SLOs you listed above, where achievement near the end of the curriculum met or exceeded faculty expectations, which of the following WSU Learning Goals did your students achieve? (select all that apply)

- Critical and Creative Thinking
- Quantitative Reasoning
- Information Literacy
- Scientific Literacy
- Communication
- Diversity
- Depth, Breadth, and Integration of Learning
- None of the above

How do I know if a program-level SLO is an example of one (or more) of the WSU Learning Goals? (i.e., How do I know what boxes I should check on the annual assessment report?)

- A program-level SLO is an example of a WSU Learning Goal when the same terms are used and the relationship is clear, for example:

  | Program-level SLO: Ability to communicate effectively | is an example of | WSU Learning Goal: Communication | because both clearly focus on communication |

- A program-level SLO is an example of a WSU Learning Goal when the wording of the program-level SLO explicitly elaborates, explains, or illustrates the general objective stated in the WSU Learning Goal, for example:

  | Program-level SLO: Students are able to write a case study | is an example of | WSU Learning Goal: Communication | because the case study is a written product of the discipline |

  | Program-level SLO: Students can evaluate apparel product quality | is an example of | WSU Learning Goal: Critical and Creative Thinking | because evaluation is an illustration of critical thinking |

- A program-level SLO is **NOT** an example of a WSU Learning Goal when you need to make inferences from the wording of the program-level SLO to relate it to the WSU Learning Goal, for example:

  | Program-level SLO: Students make use of evidence when developing lesson plans | is **NOT** an example of | WSU Learning Goal: Critical and Creative Thinking | because “make use of” may imply critical thinking but it is not explicit |

- See also the example learning outcomes published alongside the WSU Learning Goals
APPENDIX: Guidance Related to Question about Program-level Contribution to Achievement of WSU’s Learning Goals of Undergraduate Education, CONTINUED

Additional FAQs:

Why does WSU have Learning Goals of Undergraduate Education?

All bachelor’s degree requirements are rooted in WSU’s Seven Learning Goals of Undergraduate Education, which identify core skills and knowledge that students should develop through their undergraduate studies, regardless of major. WSU’s Seven Learning Goals are faculty developed and expressed broadly so as to frame study in general education (UCORE) as well as the major.

What is the difference between course-level SLOs, program-level SLOs, and institutional-level SLOs?

- **Course-level SLOs** are relatively narrow in scope, articulating what students are expected to achieve as they complete a course.
- **Program-level SLOs** are broader in scope, articulating what students are expected to achieve as they complete a program (e.g., core courses and electives for the major).
- **Institutional-level SLOs** (i.e. WSU’s Seven Learning Goals of Undergraduate Education and example learning outcomes) are very broad in scope. Students are expected to achieve these learning outcomes as they complete a bachelor’s degree (e.g., UCORE general education + the major).

Does a program (e.g., core courses and electives for the major) have to advance every WSU Learning Goal?

No. WSU’s Learning Goals of Undergraduate Education encompass the WSU undergraduate experience as a whole, including requirements for the major and general education (UCORE), as well as other academic and co-curricular experiences. As such, it is understood that any specific program (e.g., core courses and electives for the major) may not advance all seven of the WSU Learning Goals.

At WSU, UCORE is the centerpiece of the undergraduate curriculum supporting the advancement of WSU’s Learning Goals (see [UCORE’s Curriculum webpages](#) for more information). However, through the achievement of program-level SLOs, students generally demonstrate specialized knowledge and skills in the discipline, as well as disciplinary achievement of some of WSU’s Learning Goals (as appropriate to the disciplinary focus), through depth of study within the chosen academic field.

Where can I get help with determining the relationship between our program-level SLOs and WSU’s Learning Goals of Undergraduate Education?

Please contact ACE ([ace.office@wsu.edu](mailto:ace.office@wsu.edu)) if you’d like to discuss your annual report.
